

Science & industry in partnership

A key tool for deep-sea research is the Remotely Operated Vehicle or ROV. However, only a handful of these vehicles are available to science - demand far exceeds supply. Global oil & gas operations use ROVs every working day, and they are a vital component used for many routine tasks offshore.

Centre, Southampton
UNIVERSITY OF SOUTHAMPTON AND
NATURAL ENVIRONMENT RESEARCH COUNCIL

The mission of the SERPENT Project is to collaborate with key players in the oil & gas industry to use offshore infrastructure for scientific research. Bridging the gap between science and industry, SERPENT aims to progress deep-sea research and share knowledge, communicating our findings with science and conservation groups around the world.
