

Graduate School, National Oceanography Centre Southampton

PhD opportunities in Palaeoceanography and Palaeoclimate Entry 2018

Understanding past changes in the Earth System provides the essential context for future climate prediction. Southampton's Palaeoceanography and Palaeoclimate research group is big and active with critical mass of over 55 academics, post-doctoral researchers and PhD students and a suite of state-of-the-art geochemical, micropalaeontological, core processing and numerical modelling facilities. Our research is global in scope. We work in all ocean basins on key problems in Earth history spanning the Anthropocene to the Palaeozoic.

Understanding the causes of millennial scale geomagnetic change: A benchmark record and new global synthesis for late Pleistocene

Dr Chuang Xuan, Prof Paul Wilson, Dr Monika Korte (GFZ, Germany)

Abrupt climate change during the last deglaciation: linking records from Greenland to central Europe

Prof Alan Kemp, Prof Pete Langdon (UoS, Geography)

Archaeology and Volcanism in Northern Japan; Combing tephrochronology with sediment metabarcoding

Prof Tony Brown (UoS, Geog & Env), Prof Paul Hughes (UoS, Geog & Env)

Aridity in the Greater Middle East: palaeoclimate insights into human-induced climate change and the history of our hominid ancestors

Prof Paul Wilson, Dr Steve Bohaty, Dr Anya Crocker (UoS)

Evolution of Antarctic circumpolar circulation and high-latitude climate: new insights from the Southwest Atlantic Ocean

Dr Steve Bohaty, Dr Claus-Dieter Hillenbrand (British Antarctic Survey), Dr Richard Boardman (UoS, Engineering and the Environment, g-VISX-Ray Imaging Centre)

Can silicate weathering regulate atmospheric CO₂ during periods of rapid climate change? Testing the negative feedback hypothesis in the geological record

Dr Christopher Pearce, Dr Mike Clare, Dr Steve Bohaty, Prof Gavin Foster

The role of atmospheric CO₂ in the first great ice ages: insights from very high-resolution boron isotope records

Prof Gavin Foster, Prof Paul Wilson, Dr Thomas Chalk, Prof Eelco Rohling

Coastal impacts for climate scenarios that exceed 2°C warming

Dr Philip Goodwin, Dr Ivan Haigh, Prof Robert Nicholls (UoS)
